Inventory Automation Web App — Workflow Optimization Demo

This lightweight web application was built to automate basic business workflows and demonstrate junior developer capability.

Project Overview: - Designed a simple front-end using HTML, CSS, and JavaScript. - Implemented CRUD-style operations and basic data handling. - Added form validation and error handling for smoother user experience.

Impact: - Helps small businesses streamline manual tasks. - Demonstrates ability to build, debug, and document web-based tools.

This project highlights foundational development skills and supports broader technical competence for IT and security roles.
